PROJECTS

2024 January – present

Food Delivery System With Admin

- final project for our university, which was a food ordering platform. In front-end development, we utilized React.js with Material-UI (MUI) and Tailwind CSS, while Spring Boot with Spring Security was used for the back-end development
- MySQL for database management. Formik was also included to handle efficient form data management as well as authorization and authentication.

Blood banking System

- Built with the MERN stack, this system enables donor account creation, blood request management, and two-step verification for security. Node Mailer handles email notifications.

Physical Education Management System

- Physical education management system is a system that can be used to streamline the day-to-day activities of the staff and players and about the equipment's at indoor stadium in our university. This system will help the office organize the list of their available equipment and it will also help them to reduce the paper works
- Using Technology Stack Mern
